## FACE DETECTION APPLICATION

# LES DIFFERENTES ETAPES DU MACHINE LEARNING :

## PREPARATION DES DONNEES

Préparer et  
nettoyer les données  
brutes

## LA MODELISATION

Choisir le bon algorithme  
d'apprentissage pour  
traiter le problème initial

## L'EVALUATION

Entraîner et  
évaluer le modèle

## LE DEPLOIEMENT

Tester et  
déployer le modèle

# PARTIE 1 : FEATURES ENGINEERING

- Importation du data set.
- Extrait différents échantillons positifs dans les patches positifs.
- Obtenir un ensemble d'échantillons négatifs, puis prendre n'importe quel ensemble d'images d'entrée à partir de [Scikit-Image](#) et les patches ont été extraits à différentes échelles.
- Répétition de les mêmes étapes sur les échantillons [négatifs](#).

# PARTIE 2 : CLASSIFICATION BINAIRE A L 'AIDE DE SCIKIT-LEARN

- Divisons les données en ensembles d'apprentissage et de test.
- Construire le modèle avec différents types d'algorithmes tels que KNN, decision Tree, SVM et Random Forest.
- Calculer la précision de ces différents estimateurs pour découvrir le meilleur modèle.
- Tracer les performances de chaque modèle

# PARTIE 3 : EVALUATION DE LA MEILLEUR DETECTEUR

- La création d'une fonction d'évaluation pour générer toutes les métriques des besoins .
- La prédictions à l'aide des données de test pour voir comment le meilleur modèle fonctionne.

# LES DIFFERENTES METRIQUES :

## RECALL

Pourcentage d'exemples positifs qui sont correctement étiqueté.

## PRECISION

Pourcentage d'étiquettes positives qui sont corrects.

## ACCURACY

Pourcentage d'étiquettes correctes.

## F1-MEASURE

Precision fois recall divisé par precision plus recall
